DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 10 and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Conley.

Referring to claims 10 and 12 Conley discloses (fig. 2) an in situ filter for controlling flowback of proppants comprising a network of fibrous material (14), interspersed compression springs (col. 3, lines 51-54) and an aqueous soluble mixture (phenol formaldehyde, see col. 3, lines 17-26).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 10-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Saito '686 in view of Conley 2,696,914 .

Art Unit: 3672

Referring to claims 10-12, Saito discloses (fig. 1) an in situ filter for controlling flowback of proppants comprising a network of composite fibrous sponge (2), interspersed helical springs (4). Saito does not disclose an aqueous soluble mixture. Conley teaches that an aqueous soluble mixture when applied to fibers filters and properly cured allow the filter to have good dimensional stability (col. 3, lines 17-26). As it would be advantageous for the filter to have good dimensional stability, it would be obvious to one of ordinary skill in the art at the time of the invention to modify the filter disclosed by Saito to have an aqueous soluble mixture in view of the teachings of Conley.

Allowable Subject Matter

3. Claims 1-9 and 18-32 are allowed.
4. Claims 13-17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

5. Applicant's arguments with respect to claims 10-12 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
